PARKING

NEW

EXPERIENCE

Fully
automated car
parking systems

A woman with long brown hair, wearing a dark jacket and a patterned scarf, is looking out over a city skyline at sunset. The background shows a dense urban landscape with various buildings under a warm, golden sky.

STOPA is a leading manufacturer of automated parking systems and storage systems for sheet material and long-span goods in Europe. The product line ranges from stand-alone applications to integrated automated modules. In 50 years of practical experience we have installed over 2000 systems including high complex constructions. From this wealth of empirical knowledge our independent company derives it's outstanding know-how in terms of product quality, process reliability, process automation and software development.

In New York, Istanbul, Madrid, or Munich – stolzer's automated car park systems provide convenient access to mobility, especially in compact urban areas. stolzer is a brand of STOPA Anlagenbau, and offers tailor-made premium solutions on the basis of extensive practical know-how. Users benefit from this new and exclusive form of parking. Architects and planners benefit from the flexible solutions to design demands. Solutions that save space and provide more creative freedom... and that are also both economical and reliable.

“Knowing your car is safe from metropolis hazards feels so good!”

Content

4 | LP In-Line Parking System

Developed for narrow areas | Flexible integration of the transfer chamber | zinc-coated system elements | rotating platform enables driving out in forward direction (optional) | multiple parking technologies implemented

5 | UP Universal Parking System

Synergy of elemental functions unified in one storage & retrieval machine (SRM) | highest degree of flexibility/ versatility | zinc-coated system elements | time efficient due to pallet quick changer concept | self-supporting steel-girder construction available | multiple transfer chambers (optional)

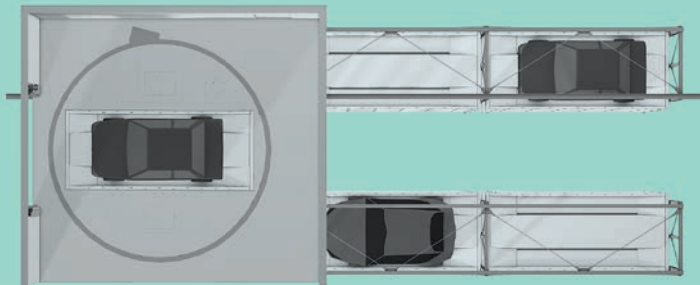

6 | SP Shuttle Parking System (premium-system)

Access via multiple transfer chambers | driving in and out in direction of traffic via rotating platform | shuttle-/ lift technology | High performance due to autonomous shuttles | zinc-coated system elements | intelligent car distribution inside the system

7 | TP Tower Parking System

Developed for highest possible parking level count and smallest area | zinc-coated system elements | possible integration of transfer chambers on any parking level | Access via multiple transfer chambers (optional) | rotating platform enables driving out in forward direction (optional)

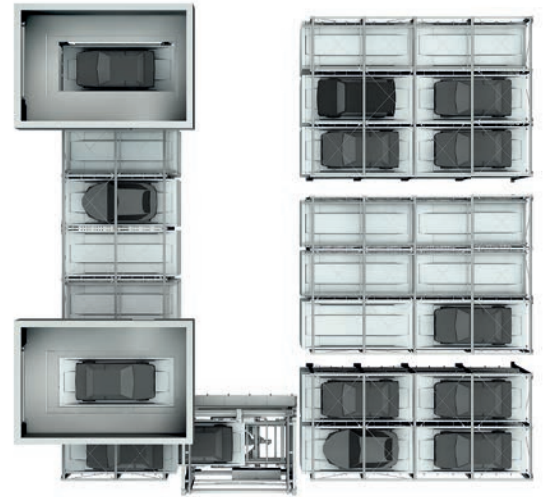

: Parking System LP In-Line Parking System

THE ADVANTAGES AT A GLANCE

- A rotating platform enables driving in and out in forward direction
- Ideal for a small number of users
- Intelligent distribution of vehicles within the system for faster access times
- Spacious entry area instead of narrow ramps or driving lanes
- No need for complicated ventilation systems or expensive lighting
- Excellent protection against theft and damage
- Fits in narrow installation spaces

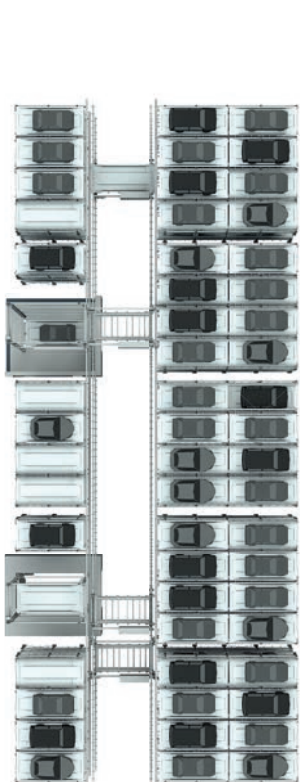

: Parking System UP Universal Parking System

THE ADVANTAGES AT A GLANCE

- High performance via combined movements
- Intelligent distribution inside the system provides fast access to one's own car
- Several hundred parking spaces per system possible
- Comfortable public accessibility even in heavy traffic
- Spacious entry area instead of narrow ramps
- Rotating platform enables driving in and out in forward direction
- No need for complicated ventilation or lighting systems
- Simple and effective protection against theft and corrosion

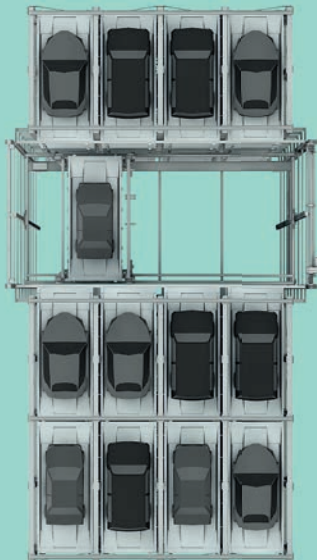

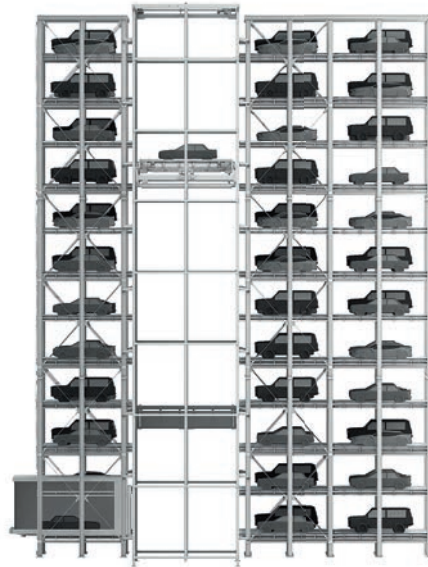

: Parking System SP Shuttle Parking System

THE ADVANTAGES AT A GLANCE

- Several hundred parking spaces per system are possible
- Comfortable public accessibility even in heavy traffic and peak times
- Autonomous shuttles provide high performance
- A rotating platform enables driving in and out in forward direction
- Intelligent distribution of vehicles within the system for quick access
- Lavish entry area for demanding/sophisticated customers
- No need for complicated ventilation or expensive lighting systems

: Parking System TP Tower Parking System

THE ADVANTAGES AT A GLANCE

- A rotating platform enables driving in and out in forward direction
- Combination of lift and shuttle for high performance
- Several hundred parking spaces per system are possible
- Comfortable public accessibility even in heavy traffic and peak times
- slight building area, ideal for city centers
- Intelligent distribution of vehicles within the system for shorter access times
- Spacious entry area instead of narrow ramps or alleyways
- No need for complicated ventilation systems or expensive lighting
- Excellent protection against theft and damage
