

The company STOPA Anlagenbau GmbH & Co. KG is an independent medium-sized plant engineering and construction enterprise with its headquarters in Achern, south of Karlsruhe, Germany. Established in 1963, our core business today is the development and manufacture of automated storage and supply systems, through which we have become one of the leading vendors in Europe. The central business area of [storage systems](#) is supplemented by the branches [machine construction & steel construction](#) as well as the conceptual design and erection of [car parks](#).

On a production floor space of approximately 13,000 square metres our team of over 200 primarily manufactures storage systems for all kinds of storable goods with the focus on sheet metal and long materials.

Our references include over 1600 completed projects worldwide both by way of integrated automation modules for processing machinery and also by way of standalone equipment for various storage tasks.

This range of production activities is supplemented by our [retrofit services](#) and [after sales services](#), providing to our national and international customers the highest degree regarding availability and long-term return on investment.
